AMENDMENTS TO THE CLAIMS

The following listing of claims will replace all prior versions and listings of claims in the application:

Claim 1 (currently amended): A diamond electron emission device comprising a light emitting device for irradiating light to a cathode, wherein at least an electron emission face of said cathode is made of diamond and the light emitting device emits light from a junction formed between the cathode and another element of the light emitting device the energy of light emitted from the light emitting device is limited to 5.4 eV or less.

Claim 2 (original): A diamond electron emission device according to claim 1, wherein said light emitting device is made of diamond.

Claim 3 (previously presented): A diamond emission device according to claim 1, wherein said electron emission face of said cathode is an n-type diamond semiconductor.

Claim 4 (previously presented): A diamond emission device according to claim 1, wherein said electron emission face of said cathode is a p-type diamond semiconductor.

Claim 5 (original): A diamond electron emission device according to claim 4, wherein said ptype diamond semiconductor includes crystal defects or an sp2 component. Application Serial No. 10/554,188 Amendment dated April 22, 2009 in Response to Office Action of December 5, 2008

Claim 6 (previously presented): A diamond electron emission device according to claim 1, wherein said electron emission face of said cathode is hydrogen terminated.

Claim 7 (previously presented): A diamond electron emission device according to claim 1, wherein said electron emission face of said cathode is oxygen terminated.

Claim 8 (previously presented): A diamond electron emission device according to claim 1, wherein said light emitting device is composed of a pn junction of diamond, a schottky junction or a MIS structure.

Claim 9 (previously presented): A diamond electron emission device according to claim 1, wherein said electron emission face of said cathode contains a sharpened projection part.

Claim 10 (previously presented): A diamond electron emission device according to claim 1, wherein wavelength energy of light emitted from said light emitting device includes 5.0 - 5.4 eV.

Claim 11 (previously presented): A diamond electron emission device according to claim 1, wherein wavelength energy of light emitted from said light emitting device is equal to or greater than 2.0 eV.

Application Serial No. 10/554,188 Amendment dated April 22, 2009 in Response to Office Action of December 5, 2008

Claim 12 (previously presented): A diamond electron emission device according to claim 1, wherein light from said light emitting device excites electrons in an impurity level to a conduction band.

Claim 13 (previously presented): A diamond electron emission device according to claim 1, wherein light from said light emitting device excites electrons in a band gap level to a conduction band.

Claim 14 (previously presented): A diamond electron emission device according to claim 1, wherein light from said light emitting device excites electrons in a level resulting from any of following components of p-type diamond: graphite; non-crystalline carbon; diamond-like carbon; fullerene; lattice defect; dislocation defect or grain boundary defect, to a conductive band.

Claim 15 (original): A diamond electron emission device according to claim 3, wherein said n-type diamond contains as an impurity at least one element among nitrogen, phosphorous, sulfur and lithium, or any one of said elements and boron.

Claim 16 (previously presented): A diamond electron emission device according to claim 1, wherein said light emitting device is composed as one unit with said cathode.

4

Claim 17 (currently amended): An electron beam source utilizing a diamond electron

emission device, wherein a light emitting device for irradiating a cathode and a cathode, in which

at least an electron emission face is diamond, are disposed together in an electron gun, wherein

the light emitting device emits light from a junction formed between the cathode and another

element of the light emitting device and the energy of light emitted from the light emitting device

is limited to 5.4 eV or less.

Claim 18 (original): An electron beam source utilizing a diamond electron emission device

according to claim 17, wherein:

an anode is separated by a space from said cathode, in which at least an electron emission

face is diamond; and

a voltage that is positive relative to said cathode is applied to said anode.

Claim 19 (original): An electron beam source utilizing a diamond electron emission device

according to claim 18, wherein a control electrode is disposed between said cathode and said

anode to regulate an emission electron current from said cathode.

Claim 20 (previously presented): A diamond electron emission device according to claim 1,

wherein said cathode comprises an n-type diamond and said other element comprises a p-type

diamond.

Application Serial No. 10/554,188

Amendment dated April 22, 2009

in Response to Office Action of December 5, 2008

Claim 21 (previously presented): A diamond electron emission device according to claim 1,

Docket No. 20239/0202826-US0

wherein said cathode comprises a p-type diamond and said other element comprises an n-type

diamond.

Claim 22 (previously presented): A diamond electron emission device according to claim 1,

wherein said cathode comprises a p-type diamond and said other element comprises a schottky

electrode.

Claim 23 (canceled).

Claim 24 (canceled).
